Walk in T shape Green house

Assembly Instructions

--- For Sliding Door

Model: UMK-GH10

Statement

Dear Customer!

May we congratulate you on buying new Greenhouse.

We feel sure that by following the detailed assembly instructions, you will find as much pleasure in actually building the greenhouse as the many hours you will spend on your greenhouse in the future. The assembly instructions are a combination of text and illustrations and no technical knowledge is required for the erection of the greenhouse. The frames are numbered and packed separately corresponding to the succession in the assembly instructions

Assemble one section at a time. However, bolts and various fittings for all sections will be found in pack of instructions.

Each pack is specified in the list of components. All detailed illustrations are marked with a symbol.

Guarantee

We grant a comprehensive guarantee that covers replacement or repairs of defective parts due to material or manufacturing fault. The guarantee does not cover transport, assembly, freight etc. Glass is not covered by the guarantee. Regarding polycarbonate we refer to the special guarantee. The guarantee is invalid if the greenhouse is not assembled according to these instructions.

Winter Protection

Our greenhouse are constructed with frame dimensions up to 50% stronger than most of the competing products. We still recommend you to protect your greenhouse during the winter.

- Supporting the roof ridge at the centre of the greenhouse.
- Removing greater snow loads.
- Taking precautions against snow falling down from, for instance a roof.
- Preventing the wind from damage the greenhouse door and windows .

Foundation

The base is not included in this delivery. However, we do recommend you buy the original supplier's base that ensures you a stable base, which is easy to build. The base is maintenance free and, of course, all fittings are included. Remember to order concrete pipes and concrete at you local dealer, as these are not included in the delivery.

Maintenance

- Grease doors, hinges and door track
- Clean the gutter for leaves etc
- Adjustment of windows
- Replacement of broken glass
- Clean the greenhouse with disinfectant before and after the growing season Complaints

We put severe demands on quality to secure that you get faultless products.

However, should a complaint occur, we kindly ask you to contact the dealer, from whom you have bought the greenhouse, To secure a quick service you should specify the extent of the defect by means of the list components in the assembly instructions.

Cautions

Remove approximately 2 inches of film from all sheet edges before installing. Remove all film immediately after the constructions is completed.

The UV-protected side of the sheet is covered with opal film and must face towards the sun.

Please put on gloves avoid of slitting your hands.

Avoid of crashing the material, results in unshapes, it is not fits in fixture.

Avoid of materials cuts the polycarbonates sheets.

Tips

- The base has to be fastened in a non-freezing depth <80cm>.
- The greenhouse is to be fastened to the base.
- The base has to be 100% level and square. The easiest way to ensure this is that the two diagonal measurements are identical.
- We recommend greasing the screws for the doors for an easier assembly.
- Glazing should only be carried out in fairly calm weather.
- Make sure that the greenhouse is square before starting to glaze.
- We recommend the frames to be degreased with acetone before glazing.
- We recommend using working gloves while glazing.
- An assistant make the job easier.

Tools

The greenhouse is assembled by means of the following tools:

- Spirit level
- Spanner/socket spanner 8 and 10 mm
- Screw driver
- Silicone pistol
- Acetone for degreasing the frames

Base

VERY IMPORTANT:

- 1. Before attaching roof bars to structure, bolts will need to be slid into each roof bar for the ridge cantilever, two more for hanging basket rail, one more for the eave cantilever bracing between the roof and the side, one more for the vent slam bar attaching (If vent position to be decided).
- 2. Prior to tightening the roof bars to structure. Please ensure that the roof bar is pushed up hard against the ridge and the gutter bar.
- 3. In order to avoid the result in a slight outside bow of the gutters and a slight downward dip to the ridge. Please support the ridge at the center of greenhouse firstly, and then tightening the nuts of ridge cantilever and eave cantilever bracing bars.

Polycarbonate sheet

Note: Please loose glazing bar #7423 & #7422 before inserting "V" panel into Alu. Profile channel.

Mounting of polycarbonate.

- 1. Only neutral silicone is to be used for mounting polycarbonate. Do not use normal silicone. The very low weight of polycarbonate requires you to press the plates firmly into the silicone to ensure proper boning. The polycarbonate plates should be secured with PVC bar capping or spring clips.
- 2. The polycarbonate is delivered with both ends open. You can close the top and bottom end off with PVC anti-dust strip or neutral silicone or alu-tape <can be 100% sealed>.
- 3. The polycarbonate is treated with UV protection <long life> and must therefore be positioned with the text/opal side out.
- 4. The polycarbonate size and silicone has been developed to account for expansion due to temperature changes equal to 0.7 cm/meter <-20°c /+40°c >.
- 5. Polycarbonate plates must not come into contact with the ground. Always rest them on cardboard or similar material during construction.
- 6. **Important**: Polycarbonate Greenhouse should be protected against strong winds until the silicone is completely dry.

PVC Capping Bar

Please trim vertical PVC capping bar which exceeding Alu. Profile.

Sliding slope PVC capping bar into Alu. Profile gap.

Two slope PVC capping bar connect together without gap.

Please trim two slope PVC capping bar edge on top end and make them connect without gap.

Downpipe

Note:

- 1. For a better seal you could run a bead of silicone around the inside edge of the gutter before inserting the outlet and stop end.
- 2. Drill a 7mm pilot hole with distance of 15mm from edge, using bolt and nut to fix the downpipe and bracket to the corner bar.
- 3. Push the 45 degree collar onto the end of the downpipe to direct the flow of water.
- 4. You could cut downpipe by yourself according to specific requirement.
